

BIL 481 – Deployment Plan

25 Mar 2025

Table of Contents:

- 1. Deployment Overview**
- 2. Deployment Process**
- 3. Configuration Plan**

Task Matrix

Section	Description	Contributor
1. Deployment Overview	Describes the general approach and tools used to deploy the project in a local environment.	Kaan Arslan
2. Deployment Process	Details the step-by-step procedure for preparing the environment, installing dependencies, and running the system.	Kaan Arslan
3. Configuration Plan	Specifies configuration files, key settings (such as API keys), model paths, and UI layout choices.	Kaan Arslan

1. Deployment Overview

The PickDish project is a desktop-based intelligent food suggestion system that uses YOLO for object detection and OpenAI's GPT model for generating recipes. The project was designed and deployed on a local Windows environment using Python 3.13 and PySimpleGUI for the user interface.

Key tools used:

- Python 3.13
- PySimpleGUI
- Ultralytics (YOLO model support)
- OpenAI API (GPT-4 Integration)
- dotenv (for managing API keys)

The system is deployed locally and does not require internet except for making API calls to OpenAI.

2. Deployment Process

1.Clone the repository:

```
git clone https://github.com/your-team/pickdish.git
```

2.Set up Python environment:

- Install Python 3.13 or compatible version
- (Optional) Create a virtual environment

3. Install dependencies:

```
pip install -r requirements.txt
```

Or manually

```
pip install PySimpleGUI ultralytics openai python-dotenv
```

4. Set up. env file in project root:

```
OPENAI_API_KEY=your-openai-key
```

5. Download and place YOLO model (best.pt) in /backend folder.

6. Run the application:

```
python frontend/GUI.py
```

3. Configuration Plan

- **.env file** is used for secure API key storage.
- **YOLO model path** is configured statically in yolotogpt.py:

```
model_path = os.path.join(os.path.dirname(__file__), 'best.pt')
```

- The GUI is configured using **PySimpleGUI themes** and layouts, and displays:
 - Image input
 - Progress bar
 - GPT-generated recipe suggestions
- OpenAI model used: gpt-4
